Reviewers:

- **Prof. V. M. Petlin, DSc.,** Lviv National University of Ivan Frank, chairman of the Academic Council of the Western Centre for Energy-informational Science
- **Prof. M. V. Kurik, DSc.,** Director of the Institute of Human Ecology in Kiev
- **Prof. V. M. Snytko, DM, DSc.,** Medical University of Odessa
- **Prof. L. V. Andryjuk, DM, DSc.,** Lviv National Medical University of Danil Halicky
- **Associate Prof. A. J. Labinskij, DM, BSc.,** Lviv National Medical University of Danil Halicky

Vasylchuk Anatoliy Leonidovich
Book 15

The Enioanatomy of Channels of Subtle Bodies

For the most part, the presented enioanatomical information related to channels and channel systems of subtle bodies has never been published before. The book, for the first time, provides a detailed description of Sushumna, Merudanda, Ida, Pingala, star channels, meridians, meridian biologically active points, microchannels, anastomotic junctions and subultrachannel networks, their functions, functional potential and their significance for human beings and much more. The channel system has been introduced and analyzed as an integral structure of subtle bodies which is responsible for the generation of universal, specific and highly specific energy-informational bioplasms and which facilitates formation of the energy-informational basis for versatile, balanced, harmonious and universal development of one's subtle bodies as well as one's spiritual and paranormal abilities. The channel system of subtle bodies can considerably expand, deepen and improve the effectiveness of enio-reflexive therapy and healing.

The author addresses the methods applied in the development of channels and channel systems, spiritual and PSI development, PSI-based healing, biolocation and out-of-body projection, based on in-depth enioanatomical knowledge of human subtle bodies. Subtle bodies have been presented as the energy-informational basis for eniological disciplines engaged in human research and the book also provides a topic-based study guide aimed at enhancing personal knowledge of the enioanatomy of subtle bodies.

The monograph will be especially useful to reflexologists, physicians, healers, eniologists, psychologists, psychotronics, parapsychologists, spiritual teachers, pedagogues, educators, coaches, theologians, individuals trained in PSI abilities and PSI healing, professionals engaged in different eniological fields, especially enioanatomy, enio-physiology, enio-medicine, enio-psychology, enio-pedagogy and enio-spiritual education and development, as well as to anyone interested in developing their subtle bodies, spirituality and PSI faculties.

Author's Acknowledgement

I would like to thank **Ing. Věroslav Hudec**, Břeclav, the Czech Republic, for preparation of the monograph for publication and his participation in the translation from Ukrainian, **Ing. Arch. Jan Paclt**, Vracov, the Czech Republic, for the cover design and his help in processing all illustrations, **Ing. Dana Ratkovská**, Hodonín, the Czech Republic and **Sofie Judasová**, Břeclav,

the Czech Republic for their participation in the translation from Ukrainian, the Mikúš family: **Ing. Tomáš Mikúš, Elena Mikúšová, Mgr. art. Silvia Hílková (Mikúšová), Mgr. Juraj Mikúš, Tomáš Mikúš, Jr., and Mr. and Mrs. Regásek**, Skalica, the Slovak Republic, for their sponsorship donation for the publication of the book.

Author's Note

Foreword

- 1 Enioanatomy of the System of Energy-Informational Channels of Subtle Bodies**
 - 1.1. Questions on the Topic of Enioanatomy of the System of Energy-Informational Channels of Subtle Bodies
- 2. Sushumna, Sushumna System of Energy-Informational Channels**
 - 2.1. Questions on the Topic of Sushumna, Sushumna System of Energy-Informational Channels
- 3. Merudanda, Ida, Pingala and Merudanda-Ida-Pingala System of Energy-Informational Channels**
 - 3.1. Questions on the Topic of Merudanda, Ida, Pingala and Merudanda-Ida-Pingala System of Energy-Informational Channels
4. Anastomotic Junctions (Kundaliny Shakti Gates, Locks)
 - 4.1. Questions on the Topic of Anastomotic Junctions (Kundaliny Shakti Gates, Locks)
- 5. Star Channels and their Systems of Energy-Informational Channels**
 - 5.1. Questions on the Topic of Star Channels and their Systems of Energy-Informational Channels
 - 5.2. Right-Star Channel and Right-Star System of Energy-Informational Channels
 - 5.3. Questions on the Topic of Right-Star Channel and Right-Star System of Energy-Informational Channels
 - 5.4. Left-Star Channel and Left-Star System of Energy-Informational Channels
 - 5.5. Questions on the Topic of Left-Star Channel and Left-Star System of Energy-Informational Channels
- 6. Enioanatomy of Meridians**
 - 6.1. Enioanatomy of the Meridian System of Energy-Informational Channels of Subtle Bodies
 - 6.2. Questions on the Topic of Enioanatomy of Meridians and the Meridian System of Energy-Informational Channels of Subtle Bodies
 - 6.3. Enioanatomy of Lung Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
 - 6.4. Questions on the Topic of Enioanatomy of Lung Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
 - 6.5. Enioanatomy of Large Intestine Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
 - 6.6. Questions on the Topic of Enioanatomy of Large Intestine Meridians and

their Systems of Energy-Informational Channels and Subsystems of Microchannels

- 6.7. Enioanatomy of Stomach Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.8. Questions on the Topic of Enioanatomy of Stomach Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.9. Enioanatomy of Pancreas-Spleen Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.10. Questions on the Topic of Enioanatomy of Pancreas-Spleen Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.11. Enioanatomy of Heart Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.12. Questions on the Topic of Enioanatomy of Heart Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.13. Enioanatomy of Small Intestine Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.14. Questions on the Topic of Enioanatomy of Small Intestine Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.15. Enioanatomy of Urinary Bladder Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.16. Questions on the Topic of Enioanatomy of Urinary Bladder Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.17. Enioanatomy of Kidney Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.18. Questions on the Topic of Enioanatomy of Kidney Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.19. Enioanatomy of Pericardium Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.20. Questions on the Topic of Enioanatomy of Pericardium Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.21. Enioanatomy of Triple Warmer Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.22. Questions on the Topic of Enioanatomy of Triple Warmer Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.23. Enioanatomy of Gall Bladder Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.24. Questions on the Topic of Enioanatomy of Gall Bladder Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.25. Enioanatomy of Liver Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels
- 6.26. Questions on the Topic of Enioanatomy of Liver Meridians and their Systems of Energy-Informational Channels and Subsystems of Microchannels

- 6.27. Enioanatomy of the Governing Vessel Meridian and its System of Energy-Informational Channels and Subsystem of Microchannels
- 6.28. Questions on the Topic of Enioanatomy of the Governing Vessel Meridian and its System of Energy-Informational Channels and Subsystem of Microchannels
- 6.29. Enioanatomy of the Anterior Middle Meridian and its System of Energy-Informational Channels and Subsystem of Microchannels
- 6.30. Questions on the Topic of Enioanatomy of the Anterior Middle Meridian and its System of Energy-Informational Channels and Subsystem of Microchannels
- 6.31. Enioanatomy of Meridian Biologically Active (Acupressure) Points**
- 6.32. Questions on the Topic of Enioanatomy of Meridian Biologically Active (Acupressure) Points

Index

Bibliography

Author's Note

Meridians were mentioned in Chinese teachings of acupuncture as early as in the 3rd century B.C. Sushumna, Merudanda, Ida and Pingala were addressed in metaphysical and esoteric teachings of ancient India, in ancient Tibetan manuscripts and, at the turn of our era, also in Agni Yoga. The existence of the right and left star channels was discovered towards the end of the 20th century by the academician A. Ignatenko. Throughout history, people have not been able to acquire and systematize sufficient enioanatomical knowledge about meridians, meridian biologically active points, Sushumna, Merudanda, Ida, Pingala,

anastomotic junctions, star channels, subultrachannel networks, integral channel systems and autonomous channel systems of human subtle bodies. Any information concerning the anatomy, functional anatomy, and enioanatomy of human subtle body channels is still relevant and, at the same time, incomplete. Such a state of affairs hinders, and in many respects completely prevents, further research into these topics, development of new enio-techniques of reflexive therapy based on the channel enioanatomy, and versatile, balanced, harmonious and universal development of one's subtle bodies, spiritual consciousness and PSI faculties. The lack of information about the enioanatomical base of channels, microchannels, ultrachannels, subultrachannels, subultrachannel networks and channel systems leads to incorrect explanation of their functions and functional significance, inability to present the mechanisms involved in the formation of blockages in the energy-informational substance transportation system, and ignorance of mechanisms associated with the purification of channels from biopathogenic, non-identical, used, anti-spiritual and other extrinsic energy-informational substances and impedes the development of techniques necessary for further improvement, correction and normalization of individual channels and the channel system as a whole.

The enioanatomy of subtle body channels and channel systems is much more complex than what has been recognized in this regard by science to date. The channel system reveals invaluable information concerning human beings and their bodies, characteristics, attributes, abilities, functions and functional potential, the Earth, biosphere, noosphere, the Universe and the past, present and future. It contains microparticles, light, energy, energy-informational substances, universal, specific and highly specific vital energy-informational bioplasms and a great deal of unfamiliar phenomena and provides some vital questions dealing with, for example: the integration of information, microparticles, light and energy; the forms and structures created as a result of integration of information and light, information and energy or light and energy; the manner in which energy-informational substances and bioplasms are formed within subultrachannel networks; the symmetry between information, microparticles, light, energy, energy-informational substances and bioplasms; the symmetry between universal, specific and highly specific vital energy-informational bioplasms; the enioanatomy of Sushumna, Merudanda, Ida, Pingala, star channels and meridians; the structure of meridian biologically active points; the significance of development of channels and channel systems of human subtle bodies; the manner in which development of subtle body channels and channel systems affects one's spirituality and PSI faculties; and the benefits the enioanatomy of subtle body channels and channel systems can provide to eniology, enio-anatomy, enio-physiology, enio-medicine, enio-psychology, enio-pedagogy and a variety of enio-methods. The enioanatomy of channels and channel systems of human subtle bodies is able to provide satisfactory and detailed answers not only to the aforementioned questions but also to much more complex and vital issues.

Thorough enioanatomical knowledge of channels and the channel system is key to balanced interdisciplinary development of all eniological disciplines engaged in the study of humans in relation to their social, biological, medicinal, psychological, educational, informational, information-energetic, spiritual, psychic and other needs. Enioanatomy of the channel system provides information which is essential for the introduction of new enio-methods aimed at developing individual channels, meridian biologically active points and the channel system, at energy-informational purification, normalization and optimization of processes involved in the distribution of energy-informational information between structures of subtle bodies, between subtle bodies and between subtle bodies and the physical body, ensuring versatile, balanced, harmonious and universal development of one's subtle bodies, characteristics, attributes, abilities, spirituality and PSI faculties. Enioanatomy of the channel system facilitates an extensive modification of existing and development of new methods pertaining to:

- enio-anatomical, enio-physiological, enio-medicinal, enio-pedagogical, enio-psychological, enio-spiritual and other eniological spheres of one's life;
- versatile, harmonious, balanced and universal development of channels, meridians, meridian biologically active points, anastomotic junctions, subultrachannel networks, autonomous channel systems and the channel system of subtle bodies;
- formation of an energy-informational basis, in subultrachannel networks, for the development, improvement and manifestation of one's spirituality, inner qualities and PSI faculties;
- attainment of structure-functional status of the channel system which facilitates universal development of chakras and subtle bodies;
- enio-reflexive therapy, regeneration, physiotherapy, and convalescence;
- integrating development of the channel system, meridian biologically active points, anastomotic junctions, subultrachannel networks, chakras, and inner and outer sheaths of subtle bodies;
- energy-informational purification of the channel system, Sushumna, Merudanda, Ida, Pingala, star channels, meridians, meridian biologically active points, anastomotic junctions, subultrachannel networks, energy-informational identity, homeostasis and immunity, preservation of energy-informational identity, etc;
- enioanatomical monitoring, assessment, prognosis, diagnoses and practical management of the structure, topography and functions of the channel system and individual channels;
- early prevention of energy-informational overload, contamination and blockages and accumulation of biopathogenic and anti-spiritual energy-informational substances within the channel system;
- normalization of functional deficiency, structural disorders and pathologies, topographic defects and structure-functional asymmetry between channels and individual subtle bodies and their structures.

Versatile development of subtle bodies and their structures, chakras in particular, is not possible without a fully developed channel system. The channel system must, therefore, be prepared and developed prior to attempting to develop one's subtle bodies and chakras. Failing to do this will hinder one's ability to achieve universal development of subtle bodies, chakras, spirituality and PSI faculties.

The contents of the Enioanatomy of Subtle Body Channels monograph provide a unique opportunity to study the enioanatomy of the channel system, to grasp its true significance and to realize the potential and appreciate the practical application of enioanatomical knowledge in a wide range of spheres and aspects of human life. The enioanatomy of the channel system is ready to become the basis for the monitoring, assessment, prognosis, diagnoses, scientific research and acquisition of in-depth information about the channel system as well as the techniques, methods and tools of its development and improvement, including its potential application in the process of one's healing, regeneration, rehabilitation and convalescence.

Precise enioanatomical knowledge of the channel system is key to the universal development of subtle bodies, development of reflexive therapy, development of new, highly effective methods of reflexive therapy, one's spiritual, inner, paranormal and divine development, preservation of good health, active life and longevity. Enioanatomical knowledge of the channel system will allow human beings to become fully aware of the functions of the channel system and the potential it holds, as well as of the steps to take in order to become versatile, harmonious, healthy, highly spiritual and proficient in PSI faculties.

The Enioanatomy of Subtle Body Channels monograph greatly contributes to enioanatomy becoming a scientific discipline and an integral part of the curriculum at all

levels of education, especially in the training of physicians, reflexologists, physiotherapists, enio-anatomists, enio-physiologists, enio-psychologists, enio-pedagogues, healers, enio-therapists and a range of other specialists. The time has come for enioanatomical knowledge to be incorporated into the fundamentals of enio-pedagogy, enio-psychology, enio-physiology, enio-medicine, informational medicine and of other eniological disciplines engaged in human research.

The channel system of subtle bodies holds many secrets about man. Its functional potential has not yet been tapped into and it has yet to become the basis of various innovative informational, information-energetic and energy-informational techniques designed to integrate one's education, development, improvement, healing, regeneration, rehabilitation and reconditioning. Therefore, I appeal to all of you who can appreciate the true significance of the enioanatomy of the channel system to study and research it and to endeavour to create new techniques for its further development and improvement.

Anatoliy Leonidovitch Vasylchuk

Foreword

The *Enioanatomy of Subtly Body Channels* monograph is a logical follow-up to everything that has ever been written on the subject of the channel system, individual channels and microchannels. The book begins with the Author's note, which is followed by a Foreword and an enioanatomical description of Sushumna, Merudanda, Ida, Pingala, star channels, meridians and their systems of energy-informational channels. The following section deals with development methodologies applicable to the channel system and its individual channels, spiritual and paranormal development, PSI healing, biolocation and out-of-body projection. Subtle bodies have been presented as the energy-informational basis of eniological disciplines engaged in human research. Each chapter is carefully structured, starting with theoretical reasoning and concluded with a list of topical questions. The concluding part of the book provides a topic-based study guide aimed at enhancing personal knowledge of the enioanatomy of subtle bodies, followed by an Index and Bibliography. The enioanatomy of the channel system has been described in generally accepted and recognized terminology.

Individual channels and their autonomous channels systems are presented in identical format. In many instances, the same sentence is used repeatedly, only with a different conclusion which, however, significantly alters its meaning. This is to emphasize the similarities and differences that exist between individual channels and autonomous channel systems. The study of the enioanatomy of channels and the channel system is thereby greatly facilitated. This approach is based on the fact that each major channel comprises a set of microchannels branching out of the cone tips of primary, vital and the majority of function-sustaining chakras, microchannels branching off of inner and outer sheaths of all subtle bodies, microchannels branching off of sheaths of subtle structures, individual Sushumna, Merudanda, Ida, Pingala, star, meridian, sheath, chakra and composite microchannels, intra-channel and extra-channel microchannels, ultrachannels and subultrachannels, including their interconnections and integration with the base, complementary and intrinsic channel structures. Major and medium-sized channels form autonomous channel systems which are further divided into subsystems and subultrasystems that feature both identical and distinct enioanatomy. The structure,

architecture, topography, function, functional potential and specific significance of each channel and autonomous channel system have not been thoroughly researched.

The extensive information content of some sentences is due to the informational saturation and the multitude of implications, interrelations, interdependencies and interactions existing between individual channels, microchannels, channel systems, subsystems and subultrasystems involved in the transportation, distribution and exchange of energy-informational substances, as well as in the generation of vital energy-informational bioplasms and substances. Sentences of this type reveal highly specific enioanatomical topics, issues, directions, attributes, functions and practical significance of channels and the channel system and constitute a logically completed enioanatomical unit. Important words or phrases have been highlighted in bold letters to facilitate the assimilation of the presented enioanatomical information and to clarify the content and essence of specific enioanatomical topics. Key enioanatomical information contained in individual sentences has been presented in bold letters. Accentuation and highlighting of main points of relevance significantly accelerates the learning process and facilitates revision of the topic, focus on main points, orientation within the text and holistic assimilation of the enioanatomical material.

For the most part, the presented enioanatomical information related to channels and channel systems of subtle bodies has never been published before. The book, for the first time, provides a detailed description of Sushumna, Sushumna channel system, Merudanda, Ida, Pingala, the Merudanda channel system, the Ida channels system, the Pingala channel system, the Merudanda-Ida-Pingala channel system, star channels, the star system, the right star channel, the right-star channel system, the left star channel, the left-star channel system, meridians, meridian biologically active points, meridian systems, microchannels, anastomotic junctions and subultrachannel networks. The author introduces new methods to be applied in the development of channels, in spiritual and PSI development, PSI-based healing, biolocation and out-of-body projection, based on an in-depth enioanatomical knowledge.

The text is accompanied by colour illustrations which essentially make the presented information more concrete. The individual images facilitate the study of the enioanatomy of channels and channel systems, both in connection with the text and separately, by helping the reader to form a clear picture of what the enioanatomy of individual chakras, microchannels and channel systems actually is and to develop correct enioanatomical thinking. The illustrations of all channels and channel system structures are rendered in their actual colours. A red colour represents channel structures of the red chakra subtle body only, orange – the orange subtle body, azure blue – the azure blue subtle body, violet – the violet subtle body and so on and so forth with respect to all of the remaining bodies. The colour carries an informational and didactic significance, represents objective physical characteristics and facilitates interpretation, which makes the study more tangible. Individual illustrations depict the forms, structures, sequence of arrangement, and the mutual positions of channel structures and their architecture.

A particular attention should be paid to the questions that follow each chapter and to the topic-based study guide designed to facilitate the assimilation of the enioanatomy of channels and channel systems of subtle bodies. The questions help the student to become familiar with individual topics of the study programme and to realize the potential the enioanatomy of the channel system holds for oneself. Furthermore, they emphasize the true personal significance of the channels and the channel system. The topic-based study guide and the topic-relevant questions have been structured so that they can be readily incorporated into any educational system adopted in various spiritual schools, courses or seminars aimed at expanding human knowledge of anatomy and enioanatomy, at developing subtle bodies and at mastering effective methods of education, development, improvement, healing, regeneration, rehabilitation, reconditioning, occupational training

and socialization on the enioanatomical basis of subtle bodies. The guide and questions can be used to develop additional highly specific plans for the study of subtle body enioanatomy compatible with a given educational system. The study guide and the topic-based questions allow the reader to realize the extent of human enioanatomy and its significance for all eniological disciplines and oneself.

The text together with all illustrations constitute an informational basis for the study of the enioanatomy of channels and the channel system and for the development of subtle bodies, which in turn allows an extensive and in-depth research into the enioanatomy of the channel system. The structured form, enioanatomical illustrations, the index, the topic-based study guide and the questions facilitate a high-quality individual study of channels and channel systems of subtle bodies, easy navigation within the book and fast retrieval of the required information for practical application and review.

With the knowledge presented in the book, one can develop innovative ways and methods of creating the enioanatomical basis necessary for further development of oneself, one's bodies, characteristics, attributes, abilities, functions, functional potential, spirituality and PSI faculties.

Knowledge of the enioanatomy of channels and the channel system of subtle bodies enables one to conduct expert analyses, to systematically evaluate and to draw valid conclusions from the known techniques, methods and means of one's eniological, enio-pedagogical, enio-spiritual and PSI-based upbringing, education, development and improvement.

The channel system is in a state of continuous functioning, transports and redistributes energy-informational substances between subtle bodies and their structures, provides subtle bodies with energy-informational substances, conducts inner and outer energy-informational exchanges and forms universal, specific and highly specific vital energy-informational bioplasms. It is, therefore, essential to study and research the structures, forms, inner architecture, topography, functions and functional potential of channels and the channel system of subtle bodies and their changes occurring during phylogenetic and ontogenetic development from the perspective of energy-informational requirements of subtle bodies and the development and functioning of oneself, including one's characteristics, attributes, abilities, spirituality and PSI-based qualities.

The Enioanatomy of Subtle Body Channels monograph represents an important step forward in seeking to have enioanatomy recognized as a legitimate field of study and a scientific discipline.

Vasilchuk A. L.: The Enioanatomy of Channels of Subtle Bodies. – Skalica: MM a spol., s. r. o., 2014 y. – 300 s.: il.

For the most part, the presented enioanatomical information related to channels and channel systems of subtle bodies has never been published before. The book, for the first time, provides a detailed description of Sushumna, Merudanda, Ida, Pingala, star channels, meridians, meridian biologically active points, microchannels, anastomotic junctions and

subultrachannel networks, their functions, functional potential and their significance for human beings and much more. The channel system has been introduced and analyzed as an integral structure of subtle bodies which is responsible for the generation of universal, specific and highly specific energy-informational bioplasms and which facilitates formation of the energy-informational basis for versatile, balanced, harmonious and universal development of one's subtle bodies as well as one's spiritual and paranormal abilities. The channel system of subtle bodies can considerably expand, deepen and improve the effectiveness of enio-reflexive therapy and healing.

The author addresses the methods applied in the development of channels and channel systems, spiritual and PSI development, PSI-based healing, biolocation and out-of-body projection, based on in-depth enioanatomical knowledge of human subtle bodies. Subtle bodies have been presented as the energy-informational basis for eniological disciplines engaged in human research and the book also provides a topic-based study guide aimed at enhancing personal knowledge of the enioanatomy of subtle bodies.

The monograph will be especially useful to reflexologists, physicians, healers, eniologists, psychologists, psychotronics, parapsychologists, spiritual teachers, pedagogues, educators, coaches, theologians, individuals trained in PSI abilities and PSI healing, professionals engaged in different eniological fields, especially enioanatomy, enio-physiology, enio-medicine, enio-psychology, enio-pedagogy and enio-spiritual education and development, as well as to anyone interested in developing their subtle bodies, spirituality and PSI faculties.

Vasilchuk Anatoliy Leonidovitch

- Associate professor in anatomy
- Doctor of Pedagogy
- Master of Psychotronics and Biomagnetology
- Eniopsychologist
- National healer of the Ukraine
- Master of Sport of the Ukraine
- Author of 20 monographs, 9 inventions, and 521 scientific papers (data from November 2017)

www.vasilcuk.cz, www.enioanatomy.com

The monograph is intended to facilitate:

- the study of enioanatomy of Sushumna, Merudanda, Ida, Pingala, star channels, nose, eye and ear channels, meridians, meridian biologically active points, anastomotic junctions, microchannels, subultrachannel networks and the channel system;
- the development of highly specific enioanatomical thinking;
- the recognition of the enioanatomical essence of the channel system of one's subtle bodies;
- the revelation of the structure, form, architecture, topography, function and functional potential of individual channels, microchannels, meridians, autonomous channels systems and the channels system;
- appreciation of the practical significance the channel system enioanatomy has for the development of subtle bodies, the formation of vital energy-informational bioplasms and substances, and the development of one's characteristics, attributes, abilities, spirituality and PSI faculties;
- the incorporation of enioanatomical knowledge about the channel system into new methods of enioanatomy, enio-reflexology, enio-medicine, enio-psychology, enio-pedagogy and other eniodisciplines;
- the utilization of enioanatomical information about the channel system in the process of evaluation, correction, modification and improvement of known enio-techniques, methods and tools relevant for the development of human beings and their subtle bodies, spirituality and PSI faculties;
- the utilization of enioanatomical information about the channel system for the elaboration and development of new enioanatomical, enio-psychological and enio-pedagogical techniques, methods and tools for versatile, balanced, harmonious and universal development of subtle bodies and their channel system;
- the utilization of enioanatomical information about the channels system which should be used to elaborate and develop new enio-therapeutic techniques, methods and tools of preventive medicine, reflexive therapy, medicine for healthy people, healthy lifestyle, enio-medicine, spiritual medicine and effective treatment of life threatening diseases, ensuring optimal morphological and functional regeneration, rehabilitation, and convalescence;
- the presentation of enioanatomical information about the channel system of subtle bodies to further concretize, direct, specify, objectify, maintain and coordinate concentration, imagination, visualization, active meditation, enioanatomical, enio-psychological and spiritual training in accordance with the enioanatomical standard and versatile, balanced, harmonious and universal development of subtle bodies, channels and the channel system;

- the utilization of enioanatomical information about the channel system for the monitoring, evaluation, prognosis, diagnostics, scientific research and acquisition of new knowledge of the form, structure, architecture, topography, functions, functional potential and practical significance of the channel system of subtle bodies.

On the whole, the monograph provides unlimited potential for the utilization of enioanatomical information about the channel system of subtle bodies which is relevant to their universal development, to the integration of upbringing, education, development, healing, and regeneration, to the practical implementation of new, highly effective enio-techniques of reflexive therapy, enio-medicine, spiritual and PSI development, and to the attainment of energy-informational purity of the channel system, energy-informational identity, homeostasis and immunity of subtle bodies, absolute health, longevity, harmony, and a life free of pain, suffering, and crises.
